

Colour Measurement and Visual Colour Assessment for Manufacturers and Designers. (How do I achieve consistent Colour?)

ENHANCE YOUR COLOUR KNOWLEDGE.

BENEFITS

is the colour you get the colour you want?

Both visual colour assessment and instrumental colour measurement play an integral part in controlling colour quality in a wide range of industries. Quality control is a vital part of the manufacturing process in any industry. Colour and appearance harmony is highly important in endorsing the perceived quality of a product.

This intensive one-day seminar will provide an insight into the influences of colour, the problems associated with visual colour perception and the association of colour with quality.

To gain the full benefits of colour measurement and visual colour assessment it is important that one understands the inter-relationship between the two techniques and also the fundamentals of colour theory.

Our seminars have been attended by over 2000 people from a wide range of industries, giving everyone a fantastic opportunity to learn about quality control procedures within different disciplines. Our seminars are extremely 'hands-on' giving attendees the opportunity to work with colour and quality control samples.

1. A greater understanding of the colour theory for colour measurement and quality control.
2. Develop the skills needed to systematically arrange, describe and communicate the properties of colours.
3. An understanding of 3D Colour Space and Equations.
4. The aim of the workshop is to increase your awareness on what influences visual colour assessment.
5. An understanding of surface appearance theory and measurement techniques.
6. Better colour communication between colleagues and suppliers resulting in less time lost due to misunderstanding in relation to specifications and design briefs.
