

NCS COLOUR SCAN 2.0

NCS Colour Scan is the latest advancement in colour technology. With its host of new features, intuitive interface and ability to read a colour from any chosen surface, NCS Colour Scan 2.0 brings instant colour satisfaction to any user.

LIGHTWEIGHT, EASY TO USE AND INFINITELY ADAPTABLE.

NCS Colour Scan 2.0 gives the NCS Notation of a selected colour from any surface, also immediately visible in the screen. You can now easily identify colours on walls, render, carpets, furniture, flooring, and clothing – virtually any inspiration object. It also isolates colours within a multi-coloured pattern for developing matching or complementary colour palettes.

It features memory for storing colours and lets users add text or voice tags to each colour. NCS Colour Scan 2.0 also shows lightness values and gives the colour's availability and location in different NCS Colour Collections, such as the NCS Exterior. For each scanned colour, translation information (RGB, CMYK etc.) is given so the user can quickly implement colours in software applications. The device even suggests similar colours to help create combinations on-the-go and its built-in pinpoint screen can isolate colours from the smallest of patterns. This is a new revolutionary handheld colour measurement tool with absolute accuracy.

PRODUCT FEATURES

Easy to Use.	Intuitive, operable with minimal training with onboard tutorial.
Quick & Accurate.	Preview samples before measurement; zoom in to manually select specific areas or automatically identify the dominant shades from detailed and multicoloured samples.
Comprehensive.	Identifies colours from a wide range of surfaces, materials and fabrics, including accurate reads from multi-coloured patterns.
Portable, Convenient.	Goes wherever you need to go; lightweight and powered with a USB rechargeable battery.
Saves Data, Saves Time.	Stores up to 100 measurements and features a built-in microphone to create an audio record for each colour.
Customer Friendly.	Provides colour recommendations to aid the customer selection and design process with Harmony Palettes, Similar Colours and Colour Navigation, ideal when searching for extra inspiration.
Enhances Creativity.	Allows recalling of saved colours to create custom palettes and merge choices with popular design applications.
Adaptable, Expandable.	Unit can be updated with all the latest colour collections; desktop software allows for easy synchronisation and addition of new collections.
Increased Customer Service.	Less time is required for matching. Portable units also ideal for rental, giving customers option to match their own colours and return to store with data for custom paint mixing.
